RE: Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report
Semi-Annual Monitoring Event – **June 2018**

Ms. Kirchner/Mr. Conrath:

Nationwide Environmental Services, Inc. (NES) is submitting the groundwater monitoring report presenting the analytical data and data interpretation summary for groundwater quality monitoring samples collected at the Southeast Rockford Groundwater Contamination Site (the Site) during the **June 2018** semi-annual monitoring event. The groundwater monitoring data obtained for the current reporting period will also be submitted in an MS Excel™ file separately via e-mail.

Please contact me at telephone (303) 232-2134 if you have any questions regarding the information provided or require any additional information.

Sincerely,

William B. Doterrer,
Sr. Project Manager

cc: Nadine Miller, City of Rockford

**Southeast Rockford Groundwater Contamination Site
Groundwater Monitoring Report
Semi-Annual Monitoring Event – June 2018**

August 2018

Nationwide Environmental Services, Inc.

Southeast Rockford Groundwater Contamination Site Groundwater Monitoring Report

Overview

A semi-annual monitoring event was performed at the Southeast Rockford Groundwater Contamination Site (Site) in **June 2018** pursuant to the current Site monitoring schedule. The field sampling activity and analytical procedures utilized for the current monitoring event were performed in accordance with the revised Quality Assurance Project Plan (QAPP, 2017) and the amended Field Sampling Plan (FSP, 2017).

The principle intent of the Site groundwater monitoring program is: (1) to monitor the status of the affected aquifer within the Site extents relative to groundwater clean-up standards established under the Record of Decision (ROD OU2, 1995) issued for the site in 1995 and (2) to the extent possible under the groundwater monitoring program scope, monitor the influence of designated Site source areas and associated remediation activities on aquifer restoration goals.

The following report presents the results of the **June 2018** semi-annual monitoring event along with cumulative results for prior monitoring events conducted at the Site. This report also provides a comparison of groundwater monitoring data obtained during the current monitoring event to analytical data from the prior monitoring event to identify any notable change in groundwater conditions that may have occurred.

The results of the current groundwater monitoring event, pertinent Site information, and groundwater monitoring data are presented in the report as follows:

- **Figure 1** – Groundwater Monitoring Network and Source Areas
- **Figure 2** – Total Volatile Organic Compounds Concentration Trends
- **Table 1** – Summary of Groundwater Analytical Results (current monitoring event)
- **Table 2** – Cumulative Groundwater Analytical Results
- **Table 3** – Groundwater Elevations (current monitoring event)
- **Table 4** – Groundwater Monitoring Network
- **Appendix A** – Groundwater Monitoring Data Validation Summary & Laboratory Data Sheets (current monitoring event)
- **Appendix B** – Groundwater Monitoring Field Data Sheets (current monitoring event)

The monitoring well inventory for the Site presented in **Table 4** is revised, as necessary, to match the current condition of the individual monitoring wells comprising the Site monitoring well network. For example, repairs or maintenance performed for monitoring well locations that result in changes to the wellhead elevation will necessitate revisions to the monitoring well inventory. The next semi-annual monitoring event is scheduled for December 2018.

NES continues to coordinate efforts with IEPA to share groundwater data obtained from common monitoring well locations at the Site. NES is not aware of IEPA sample collection from Site monitoring locations for the current reporting period and no comparative Site data from IEPA is presented in this report.

Monitoring Event Results

The field sampling sheets presenting pertinent field information and site conditions for the current monitoring event are provided in **Appendix B** of this report. The following field conditions were noted to occur during the current semi-annual monitoring event:

- MW-203 was sampled with a portable low flow sampling pump. The permanent well pump installed in the well has been removed by an unknown party.
- Local flooding resulted in the deferred sampling of groundwater monitoring well MW-200 for three days after the scheduled monitoring event.

The analytical results for groundwater samples collected during the current monitoring event are summarized in **Table 1**. Included in **Table 1** are the concentrations for the chemicals of concern (COC) identified in Section VI of the Site ROD OU2 and for vinyl chloride. Historical analytical results for groundwater samples collected from the Site monitoring network (by monitoring well location) are presented in **Table 2**. Validated laboratory data sheets and data quality summaries including relevant analytical quality assurance/quality control (QA/QC) criteria are provided in **Appendix A**.

Overall, total volatile organic compound (VOC) concentrations in groundwater have generally decreased across the Site since inception of the long-term monitoring program in March 1999. The ratios of parent VOC compound concentrations to associated breakdown product concentrations indicate biodegradation, comprising a component of natural attenuation, may be occurring at the Site. The reported detections of vinyl chloride and chloroethane in groundwater samples are further indicators that natural attenuation of parent compounds may be occurring at the Site.

A series of graphs depicting historical total VOC concentrations for select monitoring wells are presented on **Figure 2** to show total VOC concentration trends occurring at these monitoring locations. The monitoring locations used for comparison to historical analytical data were selected based on their proximity to designated source areas. Although the graphs depict analytical results from 1999 to the present, the evaluation presented in this report for total VOCs in groundwater at the Site is principally devoted to the identification of changes, if any, from the previous semi-annual monitoring event conducted in **November/December 2017**.

The graphs on **Figure 2** reveal that fluctuations in total VOC concentrations in groundwater have occurred over the period that samples have been collected at the Site under the selected remedial action plan. The causal factors for VOC concentration variability are presumed to be source area remedial activities performed by others, variation in groundwater levels and flow paths, precipitation events resulting in aquifer recharge, etc. However, NES is not aware of any specifics that would allow an interpretation of the data, other than the general observations presented in this report.

Monitoring Data Review

The status of total VOC concentrations at certain monitoring well locations, relative to the previous monitoring event (**November/December 2017**), are summarized below. The noted monitoring well locations are located proximate to, or down-gradient from, identified source areas. The Site source areas are segregated by general geographic location within the Site for the purpose of this report.

East-Source Area 7

The majority of total VOC concentrations reported for groundwater monitoring locations near the Area 7 source area have generally decreased or remained relatively stable from the previous monitoring event, except as noted. Relative increases, from the previous monitoring event, were noted for total VOC concentrations in water quality samples collected from monitoring wells MW-101B, MW-101D, MW-102A, MW-133B, and MW-133C. Several VOCs were reported above the maximum contaminant level (MCL) at the monitoring locations MW-101B, MW-101C, MW-102A, MW-102B, MW-133B, and MW-133C. During the previous monitoring event, VOCs were reported above MCLs at the monitoring locations MW-101B, MW-101C, MW-102A, MW-102B, MW-133B, and MW-133C.

North-Source Areas 4, 9, 10, & 11

Evaluation of the analytical results for the current monitoring event resulted in the following observations. Relative increases, from the previous monitoring event, in total VOC concentrations were noted in the water quality samples collected from each of the monitoring wells in these areas, except for MW-16, MW-114A, MW-121, and MW-203. Several VOCs were reported above the MCL at monitoring locations MW-16, MW-113B, MW-121, MW-124, and MW-203. During the previous monitoring event, VOCs were reported above MCLs at the monitoring locations MW-16, MW-113A, MW-113B, MW-121, MW-124, and MW-203.

Rock River

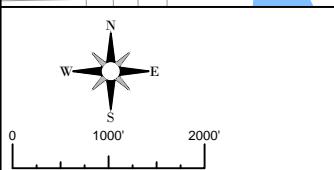

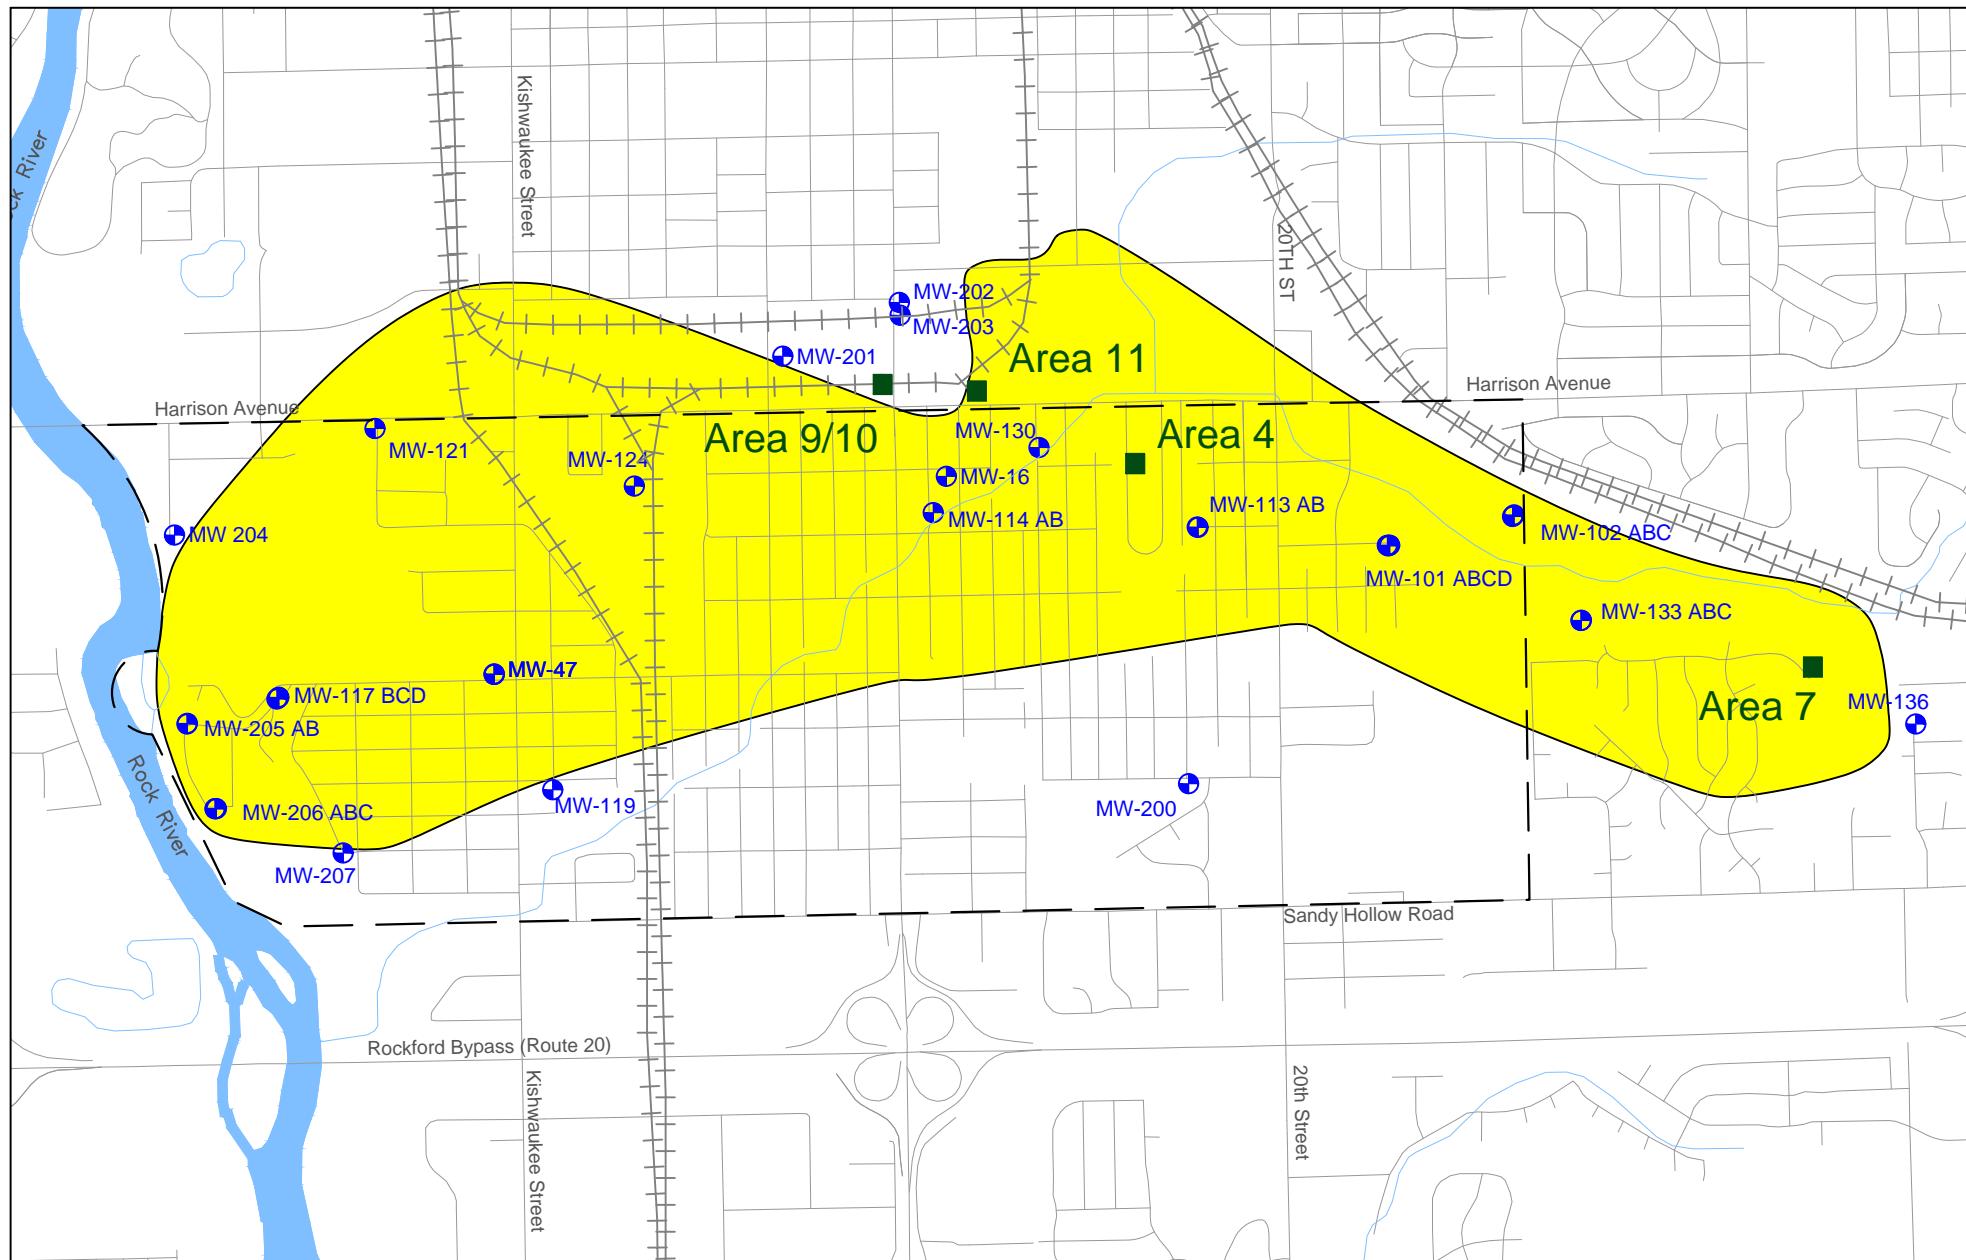

Evaluation of the analytical results for the current semi-annual monitoring event resulted in the following observations for the monitoring locations proximate to the Rock River. Relative increases, from the previous monitoring event, in total VOC concentrations were noted in the water quality samples collected from each of the monitoring wells in this area, except MW-204 and MW-207. Several VOCs were reported above the MCL at monitoring locations MW-117B, MW-117C, MW-117D, MW-204, MW-205A, MW-205B, MW-206A, MW-206B, and MW-206C. During the previous monitoring event, VOCs were reported above MCLs at the monitoring locations MW-117B, MW-117C, MW-117D, MW-204, MW-205A, MW-205B, MW-206A, MW-206B, and MW-206C.

Groundwater Monitoring Network Maintenance

Maintenance work performed occurred for the Site groundwater monitoring network since the **November/December 2017** monitoring event included the following:

- MW-201 & MW-202 - flush casings were removed and replaced with new flush casings.
- MW-101D – pump bladder, pump discharge tubing (drop tube), and slotted steel screen were replaced.

The monitoring well maintenance work for MW-101D, MW-201, and MW-202 was performed in accordance with the scope of work approved by the City of Rockford. A monitoring well completion report will be provided separately for the recent maintenance work performed at the Site and described herein.

Table 2: Southeast Rockford Groundwater Contamination Site Cumulative Groundwater Analytical Results

Results reported in micrograms per liter ($\mu\text{g/l}$)

Highlighted results equal or exceed the Maximum Contaminant Level (MCL), where applicable

CFM	Chloroform
1,1-DCA	1,1-Dichloroethane
1,2-DCA	1,2-Dichloroethane
1,1-DCE	1,1-Dichloroethene
c1,2-DCE	cis- 1,2-Dichloroethene
t1,2-DCE	trans-1,2-Dichloroethene
MC	Methylene Chloride
PCE	Tetrachloroethene
1,1,1-TCA	1,1,1-Trichloroethane
TCE	Trichloroethene
VC	Vinyl Chloride
Total VOCs	Sum of Total Volatile Organic Compound Concentrations

- B Concentration is less than the reporting limit but greater than the instrument detection limit.
D Reported concentration is based on an analysis requiring a secondary detection limit.
E The associated value exceeds the calibration range.
J The reported concentration is estimated.
U Analyte was not detected at or above the reporting limit.

Sample Type reported as undiluted, investigative sample unless stated otherwise
Fld Dupe Field Duplicate

Groundwater Monitoring
Data Validation Summary & Laboratory Data Sheets

Data Quality Control Criteria Review Summary

SDG Number: 4613718**Project Number:** 1016-2**Site:** SE Rockford, 39th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 07/18/18**Sample Matrix:** Water**Sample Date:** 06/17/18 – 06/18/18**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

MW-117B	MW-124	MW-204	MW-206B	FD-1 field duplicate of MW-201
MW-117C	MW-201	MW-205A	MW-206C	
MW-117D	MW-202	MW-205B	MW-207	
MW-121	MW-203	MW-206A	Trip Blank	

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	X
Chain of Custody (COC) Forms	X
Sample Preservation	X
Holding Times	X
Laboratory Blank Results	1
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	2
Laboratory Control Sample (LCS) Results	3
Method Specific Quality Control (QC) Results *	X
System Performance	4
Field Quality Control Results #	5
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

- Acceptable for use
- Acceptable for use as qualified
- Unacceptable for use

Yes No

Data Validation Summary Comments:

1. **Laboratory Blank Results** – Methylene Chloride was detected in the method blank for QC batches 26820 & 26947. The following table provides the qualifiers applied to the investigative results, if necessary.

Compound	Method Blank Result (µg/l)	Affected Samples	Qualifier(s)
Methylene Chloride	2.1	Trip Blank	1U
Methylene Chloride	2.6	MW-121, MW-201	1U

2. **Matrix Spike/Matrix Duplicate (MS/MSD) Results** – The MS or MSD recovery for bromomethane was outside the QC limits in QC batch 26820. Bromomethane was not detected in any samples. Therefore, qualification is not necessary.

The relative percent difference (RPD) value for bromomethane was outside the QC limits in QC batch 26947. Bromomethane was not detected in any samples. Therefore, qualification is not necessary.

3. **Laboratory Control Sample (LCS) Results** – The LCS was above QC limits for bromomethane in QC batches 26820 & 26947. Bromomethane was not detected in any samples. Therefore, qualification is not necessary.

4. **System Performance** – The corresponding continuing calibration verification (CCV) sample for bromomethane and carbon disulfide for QC batch 26820 was outside acceptance limits. Neither bromomethane nor carbon disulfide were detected in any samples. The non-detect results are qualified “UJ”.

The corresponding CCV sample for bromomethane for QC batch 26947 was outside acceptance limits. Bromomethane was not detected in any samples. The non-detect results are qualified “UJ”.

5. **Field Quality Control Samples** – Methylene chloride was detected in the trip blank associated with the investigated samples for this SDG. Positive results for methylene chloride were already qualified for method blank contamination. Therefore, qualification is not necessary.

The RPD is not necessarily calculated if both the primary and duplicate results are not five times greater than the reporting limit. The RPD between the investigative and duplicate samples was less than or equal to 4%. The RPD values only consider the comparison of two concentrations reported above the reporting limit. Qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The Pace Work Order Report #4613718 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary

SDG Number: 4613967**Project Number: 1016-2****Site:** SE Rockford, 39th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 07/19/18**Sample Matrix:** Water**Sample Date:** 06/17/18 – 06/18/18**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

MW-101A	MW-102A	MW-133A	FD-1 field duplicate of MW-101B
MW-101B	MW-102B	MW-133B	
MW-101C	MW-102C	MW-133C	
MW-101D		MW-136	

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	X
Chain of Custody (COC) Forms	X
Sample Preservation	1
Holding Times	X
Laboratory Blank Results	2
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	3
Laboratory Control Sample (LCS) Results	4
Method Specific Quality Control (QC) Results *	X
System Performance	5
Field Quality Control Results #	6
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

- | | | | |
|-------------------------------------|---------------------------------|------------------------------|--|
| <input type="checkbox"/> | Acceptable for use | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> |
| <input checked="" type="checkbox"/> | Acceptable for use as qualified | | |
| <input type="checkbox"/> | Unacceptable for use | | |

Data Validation Summary Comments:

1. **Sample Preservation** – The samples were received with an average temperature > 6°C. Based on a comparison of the detected concentrations with historical results, the samples do not appear to have been compromised. Therefore, qualification is not necessary.
2. **Laboratory Blank Results** – Methylene chloride was detected in the method blank for QC batches 27184 & 27196. The following table provides the qualifiers applied to the investigative results, if necessary.

Compound	Method Blank Result ($\mu\text{g/l}$)	Affected Samples	Qualifier(s)
Methylene Chloride	0.80J	MW-102B	1U

3. **Matrix Spike/Matrix Duplicate (MS/MSD) Results** – The MS recovery for bromomethane exceeded the QC limits in QC batch 27387. Bromomethane was not detected in any samples. Therefore, qualification is not necessary.

The MS recovery for 1,1,1-trichloroethane exceeded the QC limits in QC batch 27387. The associated investigative samples were qualified as estimate “J”.

4. **Laboratory Control Sample (LCS) Results** – The analyte recovery for bromomethane exceeded the QC limits in QC batch 27387. Bromomethane was not detected in any samples. Therefore, qualification is not necessary.
5. **System Performance** – The corresponding continuing calibration verification (CCV) sample for bromomethane in QC batch 27196 was outside acceptance limits. The non-detect results are qualified “UJ”.

The corresponding CCV sample for carbon disulfide in QC batches 27196 & 27387 were outside acceptance limits. The non-detect results are qualified “UJ”

6. **Field Quality Control Samples** – A trip blank was not included in the cooler with these samples. Qualification is not necessary.

The relative percent difference (RPD) is not necessarily calculated if both the primary and duplicate results are not five times greater than the reporting limit. The RPD between the investigative and duplicate samples was less than or equal to 22%. The RPD values only consider the comparison of two concentrations reported above the reporting limit. Qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The Pace Work Order Report #4613967 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary

SDG Number: 4613969**Project Number:** 1016-2**Site:** SE Rockford, 39th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 07/20/18**Sample Matrix:** Water**Sample Date:** 06/21/18**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:**

MW-16	MW-113A	MW-114A	MW-119	Trip Blank
MW-47	MW-113B	MW-114B	MW-130	

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	X
Chain of Custody (COC) Forms	X
Sample Preservation	1
Holding Times	X
Laboratory Blank Results	2
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	X
Laboratory Control Sample (LCS) Results	X
Method Specific Quality Control (QC) Results *	X
System Performance	3
Field Quality Control Results #	X
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

 Acceptable for useYes No Acceptable for use as qualified Unacceptable for use

Data Validation Summary Comments:

1. **Sample Preservation** – The samples were received with an average temperature > 6°C. Based on a comparison of the detected concentrations with historical results, the samples do not appear to have been compromised, with the possible exception of MW-113A. The volatile organic compound (VOC) concentrations reported for the groundwater sample collected from MW-113A were significantly lower than the previous sampling event. However, these decreased concentrations may be unrelated to the cooler temperature and will be evaluated after the next sampling event. Therefore, qualification is not necessary at this time.
2. **Laboratory Blank Results** – Methylene chloride was detected in the method blank for QC blank 27196. The following table provides the qualifiers applied to the investigative results, if necessary.

Compound	Method Blank Result ($\mu\text{g/l}$)	Affected Samples	Qualifier(s)
Methylene chloride	0.64 J	MW-114A, MW-114B, & MW-130	IU

3. **System Performance** – The corresponding continuing calibration verification (CCV) sample for bromomethane for QC batch 27196 was outside acceptance limits. The non-detect results are qualified “UJ”.

OVERALL ASSESSMENT OF DATA

The Pace Work Order Report #4613969 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.

Data Quality Control Criteria Review Summary

SDG Number: 4614428**Project Number: 1016-2****Site:** SE Rockford, 39th Event**Contractor Lab:** Pace (Grand Rapids, MI)**Validator:** Brian LaFlamme**Validation Date:** 07/20/18**Sample Matrix:** Water**Sample Date:** 06/30/18**Analytical Methods:** EPA SW-846 Method 8260B**Sample Designations:****MW-200**

The analytical data were reviewed in accordance with the analytical methods, SW-846 validation guidelines, and the Environmental Protection Agency (EPA) Contract Laboratory Program (CLP) National Functional Guidelines. The review included comparing quality control (QC) values provided on the laboratory QC forms to method QC criteria. Review of the raw data was not performed.

Quality Control Summary

QC Review Item	VOA
Completeness	X
Case Narrative	X
Chain of Custody (COC) Forms	X
Sample Preservation	X
Holding Times	X
Laboratory Blank Results	X
System Monitoring Compounds (Surrogate) Results	X
Matrix Spike/Matrix Duplicate (MS/MSD) Results	1
Laboratory Control Sample (LCS) Results	X
Method Specific Quality Control (QC) Results *	X
System Performance	2
Field Quality Control Results #	3
Other	X

X Acceptable, no qualification necessary

NR Not required

See validation summary comment

NA Not applicable

*) The reviewer has indicated in the comments, if necessary, the method specific QC results included in the data package that were reviewed.

#) Field QC may include field duplicates, trip blanks, rinse blanks, field blanks, and equipment blank samples as required by project specific criteria.

Data for the above samples are:

Is action required by the Project Manager?

 Acceptable for useYes No Acceptable for use as qualified Unacceptable for use

Data Validation Summary Comments:

1. **Matrix Spike/Matrix Duplicate (MS/MSD) Results** – The MS recovery for bromomethane exceeded QC limits and the RPD value was outside control limits. Bromomethane was not detected in the sample. Therefore, qualification is not necessary.

The RPD value for carbon tetrachloride was outside control limits. Carbon tetrachloride was not detected in the sample. Therefore, additional qualification is not necessary.

2. **System Performance** – The corresponding continuing calibration verification (CCV) sample for carbon disulfide was outside acceptance limits. The non-detect result is qualified “UJ”.
3. **Field Quality Control Samples** – A trip blank was not included in the cooler with these samples. Qualification is not necessary.

OVERALL ASSESSMENT OF DATA

The Pace Work Order Report #4614428 is 100 percent complete. The data usability is based on EPA's guidance documents. No problems were identified with reported data and analytical performance was within specified limits. The data are acceptable and meet the project's data quality objectives.
